Hello,
I've just installed the latest version of Matlab (2013a; 8.1.0.604) on my laptop (Dell D830 Latitude) running WinXP (SP 3). I put together the Phantom SDK like I did on another laptop that is working fine but I get an error on this laptop when I run the Matlab SDK software.

Error in [LoadPhantomLibraries](#)

I'm using the 705 version of the SDK; is there a newer SDK that I should be using with updated .dll files for this new version of Matlab? I set my path to the Win32 .dll files so I'm not sure why I'm not getting the code to run. If you have any advice please let me know. Any help would be welcome.

Thanks,
James

Hello James,

Make sure that you set the Path where the MatlabSDK files are (you may add with subfolders the entire MatlabSDK folder). Also add to Matlab path the folder in which the desired dll's are. I advise you to use the latest available version of dll's.
Post the full text of the error if you can.

Best regards,
Adrian
