Hello,

I'm just starting out and have had good success so far. However, I'm having to run PhDemoMatlab in order to run ReadCineFileImage. If I don't, then when I run ReadCineFileImage w/o first running PhDemoMatlab, ReadCineFileImage stops with an error that "??? Error using ==> calllib Library was not found." I have Matlab version 7.11.0.584 (R2010b), which should be new enough, newer than R2009a. I have tried to find a way to get Matlab work without the stop gap method noted above but I have not had any luck. Any help you may offer would be welcome. Cluges work for a while but its risky business.

Thanks,

James

Posts: 56At the beggining of the *ReadCineFileImage* function it is the following comment:

Code:

```
% Usage:
% LoadPhantomLibraries();
% RegisterPhantom(true); Register the Phantom dll's ignoring connected
cameras. Use this function once at the beging of your work.
% [matlabIm, origIm] = ReadCineFileImage('D:\Cine\test.cine', -3000,
true);
% other work with cine files
% .....
% UnregisterPhantom(); Use this function when you finished your work
% UnloadPhantomLibraries();
```

Regards,

Adrian
